

Boosters to Fit

Manufacturer-Provided Booster Seat Measurements 9/09 Currently Produced Models

Editor's Note: See manufacturer instructions. The American Academy of Pediatrics recommends that children ride rear facing until they reach the rear-facing upper weight limit of their harnessed child restraint (CR) and then in a CR with harness as long as possible.

BPB = Belt-positioning booster

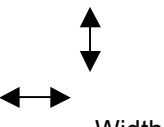

HB = High-back booster

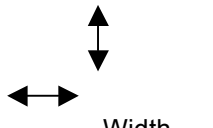

NB = Backless booster

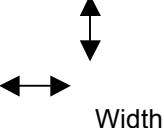

Combo = Combination child restraint and booster

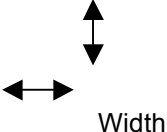

Lower LATCH = Lower LATCH attachments

Note: Some manufacturers included armrest height; others only provided platform height.

<p>Note: This list may not be all inclusive, depending upon manufacturer survey response</p>	<p style="text-align: center;">Does it Fit the Child?</p> <p>Width is measured side to side of child's maximum inner-seating space.</p> <p>Depth is measured front to back of child's inner-seating space.</p>			<p style="text-align: center;">Does it Fit the Vehicle?</p> <p style="text-align: center;">Booster base "footprint"</p> <div style="text-align: center;">  </div>
